
1 DEFINE
Question, schema, scope and acceptance rules
2 BUILD CORPUS
Retrieve, screen, deduplicate and preserve provenance
3 EXTRACT + LINK
Records, summaries, claims and field-level evidence
4 HARMONIZE + AUDIT
Normalize, coalesce, check completeness and leakage
STRUCTURED DATA AND MODELING
Evidence-linked records
values + source
Integrated database
canonical fields
Predictive models
PCE + stability
CLAIMS AND KNOWLEDGE
Readable synthesis
paper summaries
Property graph
provenance + ontology
Directional claim views
analysis-specific
TRANSFER + FEEDBACK
Schema iteration
POLARIS interface
Validation updates
