Lowers this prediction
Raises this prediction
A-site composition
Cs
Fully inorganic absorber
Yes
Perovskite composition short form
CsPbBrI
X-site/halide composition
Br / I: 2
Quenching-induced crystallization
Yes
Perovskite composition long form
CsPbBrI2
Perovskite precursor solvent formulation
DMF/DMSO (9:1)
Back-contact material
Au
Cell stack sequence
SLG | FTO | TiO2-c | Perovskite | Spiro-MeOTAD | Au
ETL material/stack and processing
TiO2-c; spin-coated
